In a nutshell: Solar and battery storage are having an absolute field day this year in the US. According to fresh numbers from the Energy Information Administration, the two sources ...

Electricity generation from solar, measured in terawatt-hours.

Solar accounted for 80% of all these additions alone, providing 30 gigawatts of electricity, or around 75% of the total renewable energy supply California has installed in the state's history....

Renewable energy sources accounted for more than 90% of new electrical generating capacity added in the United States in 2024 -- solar alone accounted for over 81%. Specifically for ...

Solar energy can be harnessed two primary ways: photovoltaics (PVs) are semiconductors that generate electricity directly from sunlight, while solar thermal technologies use sunlight to heat water for ...

Solar energy made up nearly 80% of new capacity in the US in May, according to a new report published by the US Federal Energy Regulatory Commission (FERC). Throughout the month, ...

In 2024, generators added a record 30 GW of utility-scale solar to the U.S. grid, accounting for 61% of capacity additions last year. We expect this trend will continue in 2025, with 32.5 GW of new utility ...

The latest cost analysis from IRENA shows that renewables continued to represent the most cost-competitive source of new electricity generation in 2024.

Solar PV is set to be the driving force behind the world's rapid expansion of renewable power capacity installations in the coming decade, with solar set to account for 80% of the 5,500GW ...

Solar PV will account for around 80% of the global increase in renewable power capacity over the next five years - driven by low costs and faster permitting timeframes - followed by wind, ...
