This blog is the final installment in our 4-part series on why smart grid sensors are a better investment than fault current indicators (FCIs, or FPIs in Europe).

Our electric power grid is under stress. A conglomeration of loosely interconnected systems that was built out more than a half century ago, our electric network is entering its dotage.

Sensors are inductively powered to eliminate the costs of expensive battery maintenance. Finally, all sensors are remotely configurable and integrated with our Aclara SMS software with Predictive ...

This blog is the second installment in our 4-part series on why the Aclara Grid Monitoring Platform is a better investment than fault current indicators (FCIs, or FPIs as they are known in Europe).

Reliably and efficiently control your Smart Grid using Aclara's TWACS DST to automate voltage regulation and power quality management. Multiple data feeds ...
