What is a quantumcore uninterruptible power supply (UPS)?

Uninterruptible Power for Telecommunications Infrastructure The QuantumCore Uninterruptible Power Supply (UPS) Series provides a backup power battery solution for cell phone towers and other critical telecom infrastructure, supporting telecommunication system hardening, restoration and long term emergency response.

What is a telecom battery backup system?

This compact, cost-effective telecom battery backup system is capable of storing up to 120 kW-hr of energy and offers flexibility to adapt its battery configuration to accommodate a range of voltage requirements, enabling near-instantaneous protection from input power interruptions.

What types of power systems are used in communications infrastructure equipment?

Communications infrastructure equipment employs a variety of power system components. Power factor corrected (PFC) AC/DC power supplies with load sharing and redundancy (N+1) at the front-end feed dense, high efficiency DC/DC modules and point-of-load converters on the back-end.

Do VoIP converters need power supply circuit topologies?

VoIP converters generally require power supply circuit topologies that are performance-driven (highly efficient with minimal conducted line current), easy to use and cost-effective with a small footprint and low profile. A number of topologies can be designed to meet these requirements to some degree.

These are three of the many telecommunication power supply applications that challenge power system designers to analyze a wide range of power distribution architectures and converter topologies.
