Can you install electricity outside?

From running electricity to a shed to installing armoured cable for a garden office, we've carried out a range of outdoor electricity projects. To provide you with some detail on the process of installing electricity outside, whether that's for outdoor lighting or a much larger project, below is everything you need to know.

How do I supply electricity to a garden building?

To provide electricity to an outdoor building, such as a shed, garden office or summer house, you must run an armoured cable from your main house supply to the external building. Ideally, this cable should be buried underground (usually 600mm deep) and connected to a new consumer unit installed in the garden building.

How do you run power outdoors?

Mr. Electric outlines the safest methods for running power outdoors. Plan your route and power needs. Use weatherproof, outdoor-rated conduit and wiring. Dig trenches for underground cables, following local codes. Install GFCI outlets for safety. Test the system before use. Test the system before use. Looking to 'amp up' your outdoor experience?

How can I reduce the cost of installing electricity outside?

Doing it yourself can reduce the cost of installing electricity outside. However, we only recommend doing things that don't require the expertise of an electrician. For example, digging a 600mm underground trench from your house to the area where you want power will certainly reduce the cost.

In a world increasingly reliant on technology, maintaining a stable and continuous power supply has become more critical than ever. This is particularly true for outdoor environments where power ...
