China installed a record 315 GW (AC) of new solar capacity in 2025, lifting cumulative installed PV capacity to 1.2 TW and pushing non-fossil power sources past thermal generation for the ...

A massive open-sea solar plant is under construction in China, designed to power millions of homes and test how floating solar works at scale.

China is adding more solar and wind power to its energy grid than any other economy - but that huge buildout has its challenges. Here's what we can learn

China is building an enormous network of clean energy industries on the Tibetan Plateau, the world's highest. The intention is to harness the region's bright sunshine, cold temperatures and...

Midong features 5.26 million 650-W monocrystalline bifacial double-glass photovoltaic (PV) panels. The facility's infrastructure includes more than 1.23 million supporting piles, five 220-kV...

Explore China's massive solar megaprojects. Learn how gigawatt-scale photovoltaic farms in remote regions are reshaping the global energy landscape.

[SHANGHAI] China is accelerating its record-breaking renewable energy drive, installing 1.5 times more wind and solar this year than last - three-quarters of global capacity under ...

Almost three-quarters of all solar and wind power projects being built globally are in China, says a new report that highlights the country's rapid expansion of renewable energy sources.

Plans for the Great Solar Wall, which is scheduled to be completed by 2030, provide for around 100 GW of installed capacity covering an area more than 250 miles long and 3 miles wide ...

China Building Solar Power Generation Project

China was responsible for installing a massive 256 GW of that solar capacity. For context, it took until September last year to pass the 350 GW mark. This year, the milestone was achieved in...
