China is looking to almost double its so-called new energy storage capacity to 180 gigawatts (GW) by 2027, according to an industry plan announced by authorities on Friday.

The most notable finding: by the end of 2024, China had reached 73.76 GW / 168 GWh in cumulative new energy storage capacity--an increase of more than 130% year-on-year. This figure ...

China aims to add more than 100 GW of new energy storage (primarily battery storage, excluding pumped hydro) by 2027, according to a new action plan presented by authorities on Friday.

China is making a bold move to fortify its energy infrastructure and leadership in clean technology, announcing a significant new policy to dramatically boost its battery sector through large ...

In a significant technological advancement, the country's largest "coal-to-power plus molten salt" storage project, located in Suzhou, east China's Anhui province, recently completed a ...

China's new energy storage market reached a milestone in the first half of 2025, according to a report by CNESA at the Western Energy Storage Forum in Hohhot, Inner Mongolia, ...

Of this total, 101.3 GW stems from so-called "new energy storage" technologies--largely lithium-ion battery systems--representing a 110% year-on-year surge. The figures underscore both ...

China plans to have its battery storage capacity more than double to 180 gigawatts (GW) by 2027 in a new plan aimed at attracting \$35.1 billion (250 billion Chinese yuan), the authorities...

The policy and regulatory roadmap is aimed at pushing China's installed base of large-scale energy storage - primarily lithium-ion battery energy storage systems (BESS) - to 180GW by ...

As outlined in the action plan, China's "new-energy storage system" capacity - primarily based on lithium-ion

China s new energy storage battery

batteries - is set to exceed 180 gigawatts within two years, up from 95GW as of ...
