Find out how solar panels, a renewable energy waste, are recycled and where to take your end-of-life solar panels for recycling.

Learn how to recycle solar panels at the end of their life cycle and how our advanced solar panel recycling processes extract up to 95% of the value of old panels.

Solar panel decommissioning involves removing PV panels and all associated components from a site and restoring the area to its original state. This comprehensive process ...

As solar installations age and reach the end of their projected 25-30 year lifespan, a process known as decommissioning must take place. This involves carefully removing the panels, ...

Recycling involves collecting, disassembling, and recovering valuable materials such as silicon and glass, while upcycling offers creative opportunities to repurpose old panels for alternative energy ...

Solar farm decommissioning marks the final chapter in a renewable energy site's lifecycle. This important process involves dismantling and removing solar energy systems once they reach the ...

During decommissioning, all components of the solar system, from the panels to the mounting structures and electrical equipment, are methodically disassembled. This is done to ensure minimal ...

The waste from solar panel modules is expected to reach about 8600 tons by 2030 and it will further increase to 78 million tons by 2050. The waste solar panel should be discarded or ...

PV waste presents many challenges, namely, how to recycle and reclaim valuable materials. In the absence of dedicated recycling programs, components in solar panels will end up in ...

# Decomposition of old photovoltaic panels

When solar panels, which typically have a lifespan of more than 25 years, reach the end of their lives and become a waste stream, they must be managed safely. Find information here about ...
