Explore how Computational Fluid Dynamics (CFD) optimizes battery enclosures, ensuring safety and efficiency in battery energy storage systems (BESSs) through fluid modeling.

These tools allow outline design, detailed analysis and optimization of energy storage projects. They can be used at the feasibility stage, in design, financing, and in operation.

The purpose of the tool is to help distribution utilities identify impacts and costs associated with locating a megawatt-scale solar farm and energy storage system at a certain location over other choices.

We're designing a fully integrated energy storage system for ease of deployment and sustainable energy optimization for use across solar, wind farm, and power plant applications.
