Our production line leverages cutting-edge laser technology and advanced robotics for precise assembly, welding, and quality control of battery PACK components.

Double-speed chain conveyor line: The entire module is transported through a double-speed chain conveyor line, which has multiple stations and can be operated according to customer process ...

The production process for Chisage ESS Battery Packs consists of eight main steps: cell sorting, module stacking, code pasting and scanning, laser cleaning, laser welding, pack assembly, ...

We offer modular and flexible solutions to cover many fields, such as energy storage systems of research and development machines, as well as complete assembly lines for module and battery ...

Explore key challenges and smart solutions in lithium-ion battery pack line processes to improve safety, speed, compatibility, and automation in production.

Achieve high-efficiency and high-precision production of pouch battery modules with our fully automated assembly line -- optimized for scalable, consistent output in energy storage applications, including ...

In the future, lithium-ion module and pack production lines will continue to play a key role as energy storage technology continues to advance. More innovations are expected to increase ...

Let's be honest - renewable energy is like that friend who shows up late to brunch: full of potential but wildly inconsistent. Enter the energy storage battery pack production line, the unsung ...

This automatic PACK production line supports the manufacturing of a wide range of cell module specifications and models. With a centralized control panel, it facilitates rapid program ...

Energy storage system pack production line

For cell/module pack assembly, PIA Automation offers flexible and highly automated systems for the efficient production of battery cells, modules, and battery packs. These systems are scalable, ...
