Pope Francis announces his plans to transition the Vatican to 100% solar power to support climate change efforts.

Explore Vatican City's commitment to sustainable energy projects and critical mineral exploration, contributing to Europe's green energy shift while promoting environmental responsibility.

Vatican City to become 100% solar-powered, joining a select group of green energy leaders. Pope Francis emphasizes the ethical and social imperative of combating climate change. ...

As part of an MIT Energy Initiative seminar, Emily A. Carter, a professor at Princeton University, explained the importance of climate change mitigation in the energy transition, ...

MIT News explores the environmental and sustainability implications of generative AI technologies and applications.

The new Schmidt Laboratory for Materials in Nuclear Technologies (LMNT) at the MIT Plasma Science and Fusion Center accelerates fusion materials testing using cyclotron proton beam ...

Italy has agreed to a Vatican plan to turn a 430-hectare (1,000-acre) plot of land north of Rome into a vast solar farm that will generate enough electricity to meet the needs of Vatican City.

MIT researchers developed a new fabrication method that could enable them to stack multiple active components, like transistors and memory units, on top of an existing circuit, which ...

Researchers developed a fully integrated photonic processor that can perform all the key computations of a deep neural network on a photonic chip, using light. This advance could improve ...

A look at how AI can be used to help support the clean energy transition by helping to manage power grid

Energy transition vatican city

operations, plan infrastructure investments, guide the development of novel ...

By reducing its reliance on non-renewable energy sources, Vatican City significantly decreases its carbon emissions. The solar initiatives contribute to cleaner air and set a powerful example for ...

Liquid air energy storage could be the lowest-cost solution for ensuring a reliable power supply on a future grid dominated by carbon-free yet intermittent energy sources, according to a new ...
