-----

Many agrivoltaic projects in the U.S. involve sheep grazing, where shepherds like Moore -- either contracted by solar developers or hired internally -- use their flock to control vegetation.

MNL is contracting with Xcel Energy to provide the sheep grazing at Sherco Solar, Minnesota's largest solar energy farm near Becker, which started producing power last fall.

At New South Wales' Wellington Solar Farm, a multi-year trial compared sheep grazing under photovoltaic arrays with those on open pasture, asking whether clean power and livestock can ...

At one time, the five-acre array was billed as the largest solar power plant in West Virginia, and now it also hosts sheep during the grazing season, from April to October.

On this nearly 1,500-acre property, which sits in the shadow of the retiring Sherco coal-fired power plant in Becker, a growing flock of Katahdin sheep are now a permanent part of the ...

In a groundbreaking study that combines renewable energy with traditional farming practices, researchers have observed remarkable changes in 1,700 sheep grazing amidst solar panels.

Farmer Greg Gunthorp can tell motorists are slowing down to peek at his sheep, grazing beneath 1,000 acres of solar panels. One day you see the flock. Another day they're hidden, as they ...

The booming solar industry has found an unlikely mascot in sheep as large-scale solar farms crop up across the U.S. and in the fields of Texas.

Beneath its panels, more than 2,000 sheep and 11 dogs maintain the land. These four-legged employees are solar grazing, a practice of using livestock, typically sheep, as natural mowers.

Imagine a flock of 1,700 sheep peacefully grazing underneath rows of gleaming solar panels. This unusual
