Germany's expanding array of solar panels set a new generation record as renewables take a larger share of power output from more expensive fossil fuels.

Across the EU, photovoltaics surpassed coal-fired power generation for the first time in 2025. Wind power was the strongest net electricity producer in Germany, although production was ...

Dumped Chinese solar products are flooding the German market, forcing most domestic manufacturers to move abroad or close down. So why is German startup Sunmaxx expanding its ...

The rise in solar power generation in 2025 was not exclusive to Germany but was a trend seen across the European Union, according to Fraunhofer ISE's analysis.

From January to September, wind and solar exceeded fossil power generation for the first time in Germany, reaching a record 45% share. Germany is a leader in Europe for both solar and ...

German scientists have developed a new type of solar panel that could produce up to 1,000 times more power than traditional silicon-based models. Researchers from Martin Luther ...

On October 13, a distinctive solar power plant officially commenced operation on a quarry lake in Bavaria, Germany. This is not a traditional solar installation but the world's first vertical ...

Solar farms are set for a record stretch of power sector dominance in Germany after becoming the single largest generation source in the country at the earliest point of the year ever.

Germany produced 18% of its electricity through solar power in 2025, up from 14% in 2024, a significant leap that meant solar overtook both coal and methane gas in the country's ...

Germany invents new solar power generation

Far from being a sun-drenched country, Germany boasts one of the world's highest solar power outputs. The country triggered the large-scale launch of the technology with guaranteed feed-in tariffs in the ...
