A quick slide down a bank of solar panels and off the roof is likely just as deadly as braving the smoke-filled path through the house. The spaces under PV panels, however, create a cozy place for birds ...

The effectiveness of a solar panel system largely depends on its placement. Two main factors come into play when deciding where to install solar panels: tilt angle and orientation.

I have about half of my panels flat as I don't have enough sunny space to spread them out far enough away to keep them from casting a shadow on the panels behind them; so yes, you can lie them flat.

I'm going to modify some roof snow guards to fit at the lower edge of the panels, to break the sheets up when they slide. My first thought was to anchor it to the racking, but really they should ...

It's okay if your roof doesn't face directly south. Any direction between southeast and southwest will be highly productive.

Whether to position panels in landscape or portrait orientation can significantly impact efficiency, installation feasibility, and overall energy yield. This blog explores the advantages, drawbacks, and ...

Installing a residential solar panel system can significantly reduce -- or eliminate -- your electricity bills and ensure your family's energy security in time of ever more frequent ...

Here I will discuss the pros and cons of vertical solar panel mounts, examine what factors impact their energy production, and outline some example use cases where vertical solar panel ...

Like rooftop solar, the feasibility of installing a ground-mounted system largely depends on what's above and below the panels. The panels can't be placed somewhere covered by trees.

Is it okay to install photovoltaic panels on the bottom of the board

I'm trying to decide whether to install the top panel first and work my way down, or start at bottom and go up. Seems like I'll have an easier go if I start at the top.
