This study investigates the techno-economic feasibility of installing a 3-kilowatt-peak (kWp) photovoltaic (PV) system in Kathmandu, Nepal. The study also analyses the importance of ...

Renewable and Sustainable Energy Laboratory (RSEL) generates renewable energy knowledge, innovates designs, and mitigates climate change. We focus on bio-energy and solar energy, ...

Develop competence in terms of new technologies and techniques by promoting, initiating, and conducting research and development Program for innovation, advanced technology, and enhancing ...

Feasibility Studies, Piloting, and Proposal Development for New Projects: Developing proposals related to utility-scale Solar PV plants in Nepal.

Renewable Energy Technology for Rural and Urban Development (RETRUD-18) conference was successfully organized in Kathmandu, Nepal between 29th and 31st October 2018.

Therefore, the study aims to map the energy need in the village of Khahare in the Kathmandu District, to answer the question: How could the current residential energy sources in Khahare be complemented ...

EDEN has been involved in numerous research projects focusing on innovative and sustainable approach of renewable energy. The major research projects related to the proposed project for ...

The lab will produce independent and entrepreneurial workforce equipped with useable knowledge and solutions (scientific as well as policy knowhows) through transdisciplinary projects and research ...

This research project will seek to develop recommendations for viable solar energy supply technologies by assessing and identifying possible limitations in the energy supply side; this includes analysis of ...

Kathmandu solar energy research and development

They had calculated solar energy potential based on annual mean solar radiation, solar panel efficiency, a rooftop area in which panel is installed, and total households in Kathmandu valley.
