Stand-alone microgrid hold a primary solution for electricity and water supply in remote areas access to National grid is not possible. This paper presents a detailed optimal sizing and ...

Analysis of an off-grid microgrid project for electrification in Namibia with Hardware in the loop (HIL) simulation. At present around 35 % of Namibians (around 1 million) have no access to electricity and ...

It presents a techno-economic comparison between the deployment of solar home systems to each residence and the supplying power from either a centralized roof-mounted or ground ...

Due to the widespread use of direct current (DC) power sources, such as fuel cells, photovoltaic solar (PV), and other DC loads, high-level integration of various energy storage systems, including ...

The key innovation is that the HygO microgrid is extended by a cycle for biological-mechanical water treatment. The aim of HygO is to establish hydrogen technology and promote its use in the form of ...

Given Namibia's unique energy landscape--characterized by low electrification rates, dispersed rural populations, and abundant solar resources--mini-grids offer a promising and ...

The German-Namibian collaborative project PROCEED is investigating options for an efficient, sustainable and renewable energy-based power supply in Namibia via so-called island grids.

Funding Institutions Objectives of The Project Project Partners Background Information Identify suitable designs / models for PV-based mini-grids in underserved regions that are 1. technically up-to-date, 2. economically viable, 3. easy to operate / maintain and 4. appropriate for the local needs and social context. Implement a holistic strategy to ensure the sustainability of these systems and to make rural people "first class citiz... The German-Namibian project consortium will carry out an analysis of the energy demand and the possibilities for establishing an energy supply in rural areas of Namibia. The project's main priority is ...

By using a mixed-method approach, the research combines quantitative and qualitative data to offer a comprehensive analysis of these two mini-grid systems of Namibia.
