Key contracts have been signed for the first-ever grid-scale battery storage project in Namibia, signifying the African country's dedication to modernising its energy infrastructure, ...

Let's cut to the chase: In December 2023, Windhoek made history by launching Namibia's first grid-scale energy storage system. This 54MWh project in Erongo Region isn't just a ...

The Erongo Battery Energy Storage System, also Erongo BESS, is a planned 58 MW (78,000 hp) battery energy storage system installation in Namibia. The BESS, the first of its kind in the country and in the Southern African region, will be capable of providing 72MWh of clean energy to the Namibian grid.

The storage facility will be built at the Omburu substation, an existing grid node in northern Namibia. When the BESS is connected to the grid in early 2026, it will be one of the largest energy storage ...

In December 2023, the country signed contracts for its first utility-scale battery energy storage system (BESS) - a 54MW/54MWh project at Omburu Substation [1] [2]. But why should the world care about ...

The project features a 45 MW / 90 MWh BESS facility, representing the country's largest battery, and is part of the broader Transmission Expansion and Energy Storage (TEES) program.

NamPower, Namibia's state-owned power utility, has signed a contract with a Chinese joint venture to build the first utility-scale battery energy storage system (BESS) in the country and the Southern ...

Surplus electricity from RE generation as well as cheaper electricity imports from the Southern African Power Pool (SAPP) can be stored in the BESS. The stored energy could supply customers during ...

NamPower's Omburu Battery Energy Storage System near Omaruru is the country's flagship storage project.

Namibia s largest energy storage power station

Located near Omaruru, the Omburu BESS Project will provide 51MW/51MWh of capacity using lithium-ion (LFP) battery technology. Once operational, it will allow electricity to be stored for ...
