How to install a solar power system?

To install a solar power system, position your photovoltaic panels directly under the noontime sun for maximum efficiency from your photovoltaic unit before installation. Remove all unnecessary obstructions to sunlight, such as branches, before installing your solar unit.

What should a property owner know before installing a solar system?

The following guidance is intended to help property owners and those involved in managing, maintaining, or making changes to historic buildings understand the issues to be considered when designing and installing solar power systems. Before installing a PV system, it is important to understand the electrical energy needs of the building users.

Do historic buildings need solar panels?

Historic buildings weren't designed with the additional weight of solar panels in mind, making structural considerations crucial. Roof Condition: Many historic roofs may be fragile or in need of repair. Solution: Conduct a thorough structural assessment before planning any installation.

How do you make solar panels look better on a historic roof?

Solution: Consider less visible roof sections, even if they're not optimal for energy production. Sometimes, a less efficient placement that preserves aesthetics is the best compromise. Panel Design: Traditional solar panels can look out of place on historic roofs. Solution: Explore low-profile or camouflaged options.
