China produced 32 of global renewable electricity, followed by the United States, Brazil, Canada, and India. The International Renewable Energy Agency (IRENA) reports that these ...

Since 2020, 14 countries have consistently generated over 95% renewable electricity, according to Ember's Yearly electricity data. In eight of these countries, electricity has been almost ...

While many countries are making strides toward reducing their carbon footprint, only a few can claim to rely solely on renewable energy for their electricity generation.

Global Investment in Clean Energy Is Outpacing Fossil Fuels For the past 10 years, global spending on clean energy has been higher than investments in fossil fuels. This includes ...

Renewable energy is energy from sources that are naturally replenishing but flow-limited; renewable resources are virtually inexhaustible, but they are limited by the availability of the resources.

Climate change is the greatest challenge facing humanity today and restricting it is the only way to ensure our survival. A commitment to clean energies that do not generate emissions is a ...

Newsletter The International Renewable Energy Agency (IRENA) produces comprehensive, reliable datasets on renewable energy capacity and use worldwide. Renewable energy statistics 2025 ...

What Would Happen If We Only Use Renewable Energy? If we were to shift entirely to renewable energy sources, the first notable change would be a substantial decrease in carbon emissions.

Why Should We Only Use Renewable Energy? Renewable energy significantly enhances environmental quality, contributing to cleaner air and water and improving health outcomes, ...

While technological innovation is essential, it is not sufficient on its own. Supportive policies, including

Only uses renewable energy

feed-in tariffs, carbon pricing mechanisms, and renewable portfolio standards, are ...
