Our solar glass products meet stringent international standards and certifications. We provide customized products in a range of sizes and thicknesses to meet our customers' needs.

Within the category of flat glass, various types are utilized in solar cell applications, including low-iron tempered float glass, anti-reflective coated glass, and others.

Customized ITO / FTO conductive glass plays a crucial role in scientific experiments, offering excellent conductivity, transparency, and stability. Ideal for photovoltaics, sensors, and analytical instruments.

NSG TEC(TM) is a group of products, including a comprehensive range of TCO glass (Transparent Conductive Oxide coated glass), optimised to suit a variety of thin film photovoltaics, with different ...

Solar Shield [®] is a nano scale transparent polymer coating designed to protect glass solar panels. It stops the adhesion of soil, grime, pollution, acid rain & other contaminants allowing your panels to ...

PV modules experience reflection losses of ~4% at the front glass surface. This loss can be mitigated by the use of anti-reflection coatings, which now cover over 90% of commercial modules.

Currently, single-layer antireflection coated (SLARC) solar glass has a dominant market share of 95% compared to glass with other coatings or no coating, for Si PV modules. This ...

Our product portfolio features tempered, ultra-clear solar glass solutions with anti-reflective coating that diminishes reflectivity and improves light transmission.

Explore how anti-reflective coatings boost solar efficiency, reduce glare, and enhance durability in photovoltaic glass. Unlock higher output and longer panel life.

In order to increase PV power production, AR coatings are included on the air-glass interface on the vast

Photovoltaic panel coated glass

majority of PV modules. Typical AR coatings (e.g., porous silica) increase light transmission by ~3%, ...
