With the installation in 2011 of a 2 MW advanced energy storage system and an automatic disconnect switch, the facility evolved into a complete smart grid with full CERTS functionality--meaning, it now ...

Could modular nuclear reactors become viable for remote prisons? The U.S. Department of Energy's recent RFI suggests they're seriously considering it.

Energy-efficient lighting solutions, like LED technology, reduce energy consumption and require less maintenance, contributing to a positive correctional environment and supporting inmate ...

While this scenario sounds like the opening scene of a B-movie, it highlights why fixed energy storage in prisons isn't just about saving money - it's about maintaining order in ...

Correctional facilities weren't designed with energy efficiency in mind, but that's exactly what makes them such high-potential candidates for waste heat recovery.

By using projected savings from energy upgrades, you can rehabilitate your facility without using capital from your budget. And with our promise to guarantee savings, there's no risk to your ...

Hall and Bain provide a review of electrochemical energy storage technologies including flow batteries, lithium-ion batteries, sodium-sulphur and the related zebra batteries, nickel-cadmium and the related ...

ALAMEDA COUNTY SANTA RITA JAIL Achievements In Energy and Water Efficiency Project Overview: Santa Rita Jail, the fifth largest county prison in the nation with a capacity of 4,000 ...

In addition to solar and CHP, the facility has five small wind turbines and a 2 MW battery energy storage system. This combination of energy assets enables the facility to island itself from the grid for an ...

Prison solar installations usually involve large-scale photovoltaic systems designed to offset a large portion of

Prison Energy Storage Device

a facility's energy consumption. These systems can be mounted on rooftops, ...
