How does a self-generator flywheel system work?

1) The document describes a self-generator flywheel system that aims to generate electricity using a flywheel rotated by a motor. 2) The system works by using a motor to spin a flywheel at high speeds, storing rotational kinetic energy. An alternator is then used to convert the mechanical energy of the spinning flywheel into electrical energy.

What are the advantages of free energy generator using flywheel?

The main advantage of Free energy generator using flywheel is that it can generate energy without used of any extra equipment and this free energy generation is non-hazardous and environmental friendly. Can be use in various applications like electric fuel cars, household, industrial and increase the efficiency of traditional electrical.

How do you run a generator with a flywheel?

Fit the flywheel to the generator and the pulley to the motor. Place the rubber belt to the flywheel and pull it to the pulley on the motor. Do the wiring as shown in the diagram above. Press Switch 1 and leave it to run for about a minute. Press on switch 2 and switch the off switch 1 and the system should keep running by itself.
