Solar microgrid design and engineering services for residential, commercial, industrial, and municipal solar projects that can incorporate multiple sources of power generation with energy storage.

A solar microgrid is a localized energy system that integrates solar panels, energy storage devices (such as batteries), and often other renewable energy sources like wind or hydroelectric power.

Multiple solar panels are connected in series and/or in parallel to feed DC power to a solar charge controller, which charges a battery. A DC-to-AC power inverter, then, takes DC power from the ...
