What type of inverter is used in Vattenfall?

As a static inverter, Mercury arc valves were used. The Swedish company ASEA manufactured the connection for Vattenfall, the state-owned energy provider. In 1970 the service was re-engineered to transmission capacity of 30 megawatts at a voltage of 150 kV by using the first thyristor module for HVDC applications.

How much power does a Nord control cabinet inverter have?

NORD control cabinet inverters have a power range of up to 215 HP and thanks to their wide range of functionality can be perfectly adapted to many customer applications. NORD Frequency Inverters already meet the requirements of energy efficiency classification IE2 of the new Ecodesign directive (EU) 2019/1781 (valid from 1st of July 2021).

How do I choose a static inverter?

When selecting a static inverter from SOROTEC, understanding your specific application requirements is vital. Key factors include: Power Capacity: Ensure the inverter's capacity matches your energy demands. For industrial applications or large-scale setups, high-capacity models are preferable.

Why are static inverters important for data centre management?

Static inverters offer not only regularized voltage levels but also lesser energy losses, thus making them an indispensable component of modern-day data centre management facilities. One of the key benefits of using static inverters is their efficiency, making sure that as little energy as possible is lost during the conversion process.

These filters are usually near the alternating current terminal of the static inverter transformer. They consist of a series coil which passes the load current, with a parallel capacitor to form a resonant circuit.
