US residential and utility-scale solar energy is booming. Learn the current and future trends and how solar compares to other renewable energy sources.

There are now 262 gigawatts direct-current of solar capacity installed nationwide, enough to power 45 million homes. In the last decade, solar deployments have experienced an average annual growth ...

The Energy Information Administration (EIA) reported that, in 2024, the United States added a record 30 gigawatts (GW) of utility-scale solar to the grid, accounting for 61% of new ...

According to Solar Energy Industries Association and GTM Research, the market share of US has increased above 10% in the world's solar power installations in the past seven years.

Solar continues to dominate new electricity generation capacity added to the grid in the United States, according to the Energy Information Administration's (EIA) latest release of its Electric ...

We expect the combined share of generation from solar power and wind power to rise from about 18% in 2025 to about 21% in 2027. In our STEO forecast, utility-scale solar is the fastest ...

The latest release includes data on 5,712 facilities covering 49 states (plus the District of Columbia). The most recent facilities added to the USPVDB became operational as recently as the third quarter of 2024.

In our latest Short-Term Energy Outlook (STEO), we expect that U.S. renewable capacity additions--especially solar--will continue to drive the growth of U.S. power generation over the next ...

From 2014 to 2024, leading solar deployment states greatly increased solar electricity penetration. California (32%), Nevada (31%), and Massachusetts (26%) led the way in 2024, each ...

The current status of solar power stations in the United States

The United States conducted much early research in photovoltaics and concentrated solar power. It is among the top countries in the world in electricity generated by the sun and several of the world's ...
