Ford Motor Company is making a dramatic strategic shift, writing off nearly \$20 billion in electric vehicle investments while pivoting toward the booming energy storage sector.

Beneath the industry's boom lies a critical question: When an energy storage integrator suddenly goes bankrupt, who will take over the abandoned systems?

Storage Storing energy for a resilient, reliable power grid Like a savings account for the electric grid, energy storage neatly balances electricity supply and demand. When energy generation exceeds ...

To reduce greenhouse gas emissions and meet net zero goals, the power grid must replace fossil fuel power plants with cleaner energy systems that include large-scale energy storage.

China built enough energy storage capacity to power 20 million homes in 2024, yet 6.1% of these systems are essentially taking a permanent nap [1]. The global energy transition's poster ...

Multiple years into the project, neither state is anywhere near to building 1% of the energy storage that would be needed to make their fantasy systems work. But even in these very early ...

The battery energy storage industry has experienced a sobering reality check in recent months of 2025. Despite record-breaking deployment numbers--with Q1 2025 setting a new record ...

Together, solar and battery storage account for 81% of the expected total capacity additions, with solar making up over 50% of the increase. Solar. In 2024, generators added a record ...

wind turbines spinning furiously and solar panels soaking up sunlight, only to have that energy discarded because there's nowhere to store it. This frustrating phenomenon, known as ...
