-----

It is a specialized type of glass that can help improve the energy efficiency of a building and make it more comfortable for its occupants. In this article, we will explore the benefits, types, and ...

Solar control glass is not necessarily coloured or mirrored glass, although such finishes can be applied for aesthetic purposes if desired. It incorporates invisible layers of special materials on the glass ...

Low-e glass minimizes ultraviolet and infrared light transmission while maintaining optimal visible light transmittance. This keeps interiors warmer in winter and cooler in summer without sacrificing natural ...

Solar control glass is ideal for helping to maximize natural daylight while reflecting a high proportion of solar radiation away from the glass, contributing to keeping the indoor space bright but cool. What ...

Chinese scientists develop self-healing solar glass that can generate electricity while remaining transparent.

When assessing the glass materials employed in solar cell technology, two primary factors must be considered: the production or synthesis method and the fundamental chemical ...

Most people assume that when solar technology breaks, it becomes expensive waste. A team of Chinese researchers has just shattered that assumption with a new type of transparent solar ...

Solar control glass is a type of high-performance glazing that reduces the amount of solar heat entering a building. Filtering infrared radiation and reflecting excessive heat ensures ...

Solar applications require flat glass. So-called Pattern Glass is mostly used as front glass in crystalline modules, whilst float glass is used for both substrate and back glass in thin-film modules.

Let the light in with Mitrex Solar Glass -- a powerhouse in disguise, where photovoltaics meet limitless design, where color meets clarity. You're not just choosing glass; you're choosing a future where ...
