What type of energy does Venezuela use?

[español] o [português] Venezuela relies heavily on domestic production of fossil fuels, with oil and natural gas comprising approximately 90% of the country's total energy supply. Hydro power also plays a key role in electricity generation, accounting for roughly half of installed capacity.

How much solar power does Venezuela have?

In 2019, Venezuela had installed 5.32 MW of solar power generation capacity and 71.28 MW of wind capacity. Venezuela plans to incorporate an additional 10,000 MW of wind energy by 2035. The use of renewable energy in remote areas would alleviate the risk of blackouts common to much of the country.

How much electricity does Venezuela generate a year?

Latest estimates show Venezuela generating between 109 and 133 TWh of electricity annually , with 62% coming from hydropower and the remaining 38% from hydrocarbon power plants. The majority of Venezuela's electrical demand is met by the Simon Bolivar Hydroelectric Plant.

What is the Venezuela plan for the national electric system?

The Venezuela Plan for the National Electric System aims to integrate renewables in the power system by including it in medium and long-term strategies. It aims to develop the use of renewables within isolated rural communities including solar, small hyd
