Discovered in 1817 by Swedish chemist Johan August Arfwedson in the mineral petalite, lithium is also found in brine deposits and as salts in mineral ...

Chile, Argentina, and Bolivia form the so-called "lithium triangle", which are large lithium deposits that span across these three countries. While Bolivia has huge lithium resources, it has ...

Find out where lithium is found globally, from brine lakes to hard-rock mines, and how geology shapes extraction, supply, and refining routes.

Lithium is a lightweight metal used in the cathodes of lithium-ion batteries, which power electric vehicles. The need for lithium has increased significantly due to the growing demand for EVs. ...

Phosphate is a key ingredient in lithium-ion batteries, which are used in most electric vehicles. The new discovery could help to make electric vehicles more affordable and accessible.

While relatively abundant in the Earth's crust, economically viable concentrations are primarily located in brine deposits, pegmatite ores, and ...

Deep beneath the high desert along the Nevada and Oregon border, the United States is sitting on what researchers describe as a \$1.5 trillion cache of lithium, the light metal that powers ...

What are the concerns about deep-sea mining? In addition to the issues of ownership and who would benefit from minerals found in international waters, organizations around the world ...

Currently lithium-bearing minerals, such as spodumene and petalite, are chiefly extracted from pegmatites in Australia, Zimbabwe and Brazil; however, future ...

Data on lithium reserves in various countries, including which country has the largest lithium reserves in the

Where is lithium found

world and why lithium is important in the modern ...

Minerals critical to the clean energy transition have been found in the deep ocean floor. These include cobalt, lithium, copper, nickel, manganese and zinc that are used in batteries for ...

Lithium Often described as the "white gold" of the energy transition, lithium is a core part of lithium-ion batteries and therefore indispensable for electric vehicles and stationary batteries. ...
