With the new projects online, renewables (including wind, solar, geothermal and hydropower) and battery storage now make up 30% of the country's large-scale power generating ...

Solar, wind, and batteries are set to supply virtually all net new US generating capacity in 2026, according to the latest EIA data.

View our portfolio of hundreds of operating and development solar, wind, and storage projects across the United States.

Here are the 25 biggest solar, wind, and battery-storage installations completed in the U.S. in 2024. Canary Media's chart of the week translates crucial data about the clean energy ...

In 2025, we expect 7.7 GW of wind capacity to be added to the U.S. grid. Last year, only 5.1 GW was added, the smallest wind capacity addition since 2014. Texas, Wyoming, and Massachusetts will ...

The most common failure in off-grid systems isn't a lack of sunshine--it's the power gap during consecutive rainy days or at night when energy consumption often peaks. At Energy-Elege, ...

Active capacity in U.S. interconnection queues increased nearly eight-fold over the last decade, and is now more than twice the total installed capacity of the existing U.S. power plant fleet.

This study investigates the techno economic benefits of integrating Battery Energy Storage Systems (BESS) into wind power plants by developing and evaluating optimized hybrid operation...

These projects integrate multiple renewable energy sources such as solar, wind, battery energy storage, and hydrogen production to create a resilient and efficient energy system.

Wind solar and battery power generation projects

Mid-2026 starts: Projects beginning construction by July 4, 2026, or in service by 2027, may still qualify but face uncertainty around FEOC compliance. Beyond utility-scale wind and solar, phaseouts are ...
